

TIME MANAGEMENT APP

VISUALISING TIME USAGE AND IMPROVING PRODUCTIVITY THROUGH GOAL TRACKING

Problem?

- Users lack awareness of how time is spent
- Leads to poor productivity and imbalance
- No simple tool for tracking daily activities

Solution

- Single – page web application
- Supports JSON input + manual input
- Visualises activity breakdown
- Evaluates productivity goals

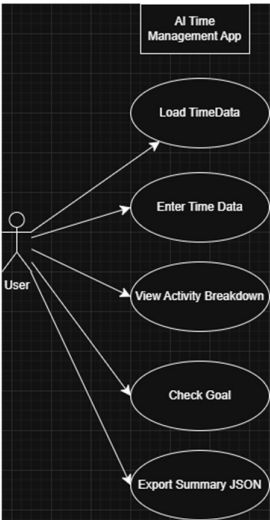

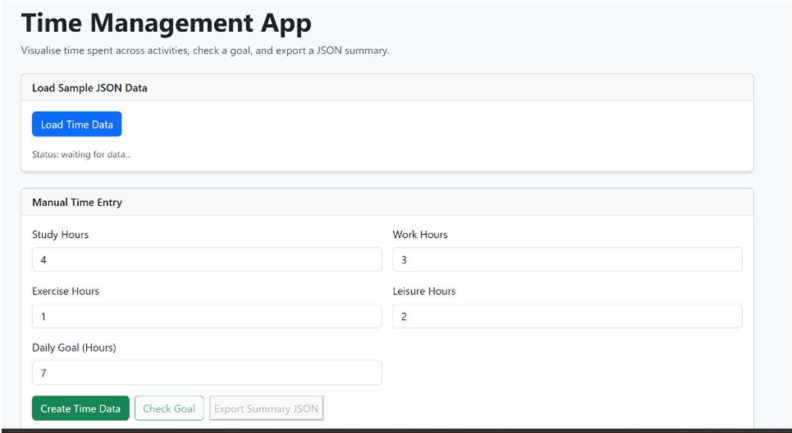

Figure 2 Use Case Diagram, user interactions with the application

TIME MANAGEMENT APP

VISUALISING TIME USAGE AND IMPROVING PRODUCTIVITY THROUGH GOAL TRACKING

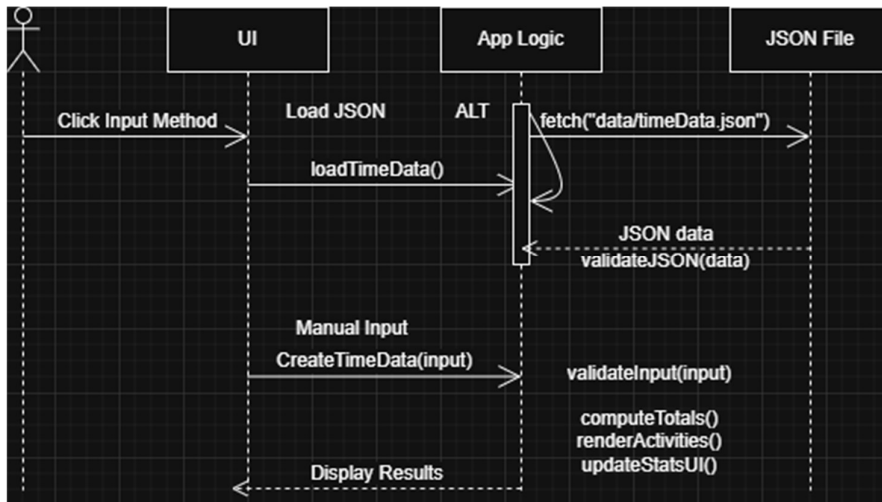

Figure 4 Sequence Diagram

Key Features

- Load time data from JSON
- Manual activity input
- Activity visualisation (Progress bars)
- Goal checking with feedback
- Export summary JSON

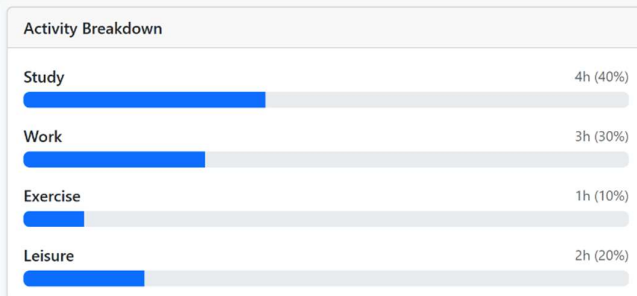

Technologies Used

- HTML (Structure)
- Bootstrap (UI styling)
- JavaScript (logic + interaction)
- JSON (data handling)

Load Sample JSON Data

Load Time Data

Status: data loaded successfully

Goal Feedback

Congratulations! You met your goal (7h).

Total hours 10.0h
Productive hours 8.0h
Leisure hours 2.0h

Example showing activity breakdown and goal feedback

Future Improvements

Results

- Fully working single-page application
- Meets all core functional requirements
- Improved usability with manual input and clear visual feedback for users
- Persistent storage (LocalStorage / database)
- Advanced charts and custom activity categories
- Accessibility features
